

GISP

The Global Invasive Species Programme

The GISP mission is to conserve biodiversity and sustain human livelihoods by minimising the spread and impact of invasive alien species (IAS).

www.gisp.org

GISP seeks to • improve the scientific basis for decision-making on invasive species • develop capacities to employ early warning and rapid assessment and response systems • enhance the ability to manage invasive species • reduce the socio-economic impacts of invasive species and control methods • develop better risk assessment methods, and • strengthen international agreements.

GISP strives to • develop public awareness and education about invasive species • improve understanding of the ecology of invasive species • examine legal and institutional frameworks for controlling invasive species • develop new codes of conduct for the movement of species, and • design tools for quantifying the impact of invasive species.
